

Busline Online Temperature Measurement Price

Article Overview

Busline temperature measurement systems vary widely in price depending on sensor type, system scale, and integration features, typically ranging from a few hundred to several thousand dollars per sensor or controller unit.

Overview of Systems

Busline or busbar temperature monitoring systems are designed to prevent overheating, enhance safety, and optimize electrical performance in industrial, commercial, and data center environments. Key systems include:

- **SenseLive Wireless Busbar Temperature Monitoring System:** Uses battery-powered or CT-powered wireless sensors with an Edge8000 controller, supporting up to 60 sensors per controller. Features include real-time monitoring, SCADA/cloud integration, relay alarms, and compliance with NB/T, IEC, and IEEE standards. Sensors operate in harsh conditions (-50°C to $+125^{\circ}\text{C}$) and controllers from -10°C to $+55^{\circ}\text{C}$.
- **Elmeasure Wireless Busbar Monitoring:** Employs strap-on wireless sensors for retrofit or space-constrained panels, providing real-time thermal data, predictive maintenance, and alerts via SMS/email.
- **Acrel Wireless Busway/Busbar Systems:** Includes infrared non-contact sensors (AMB300) and data transceivers (AMB310) for real-time monitoring, suitable for high-current busways in data centers and industrial plants.
