

Cause of the electrical box explosion in Norway

Overview

An investigation by Tesla has determined that the January fire that destroyed a Model S while it was charging at a Supercharger station in Norway was caused by a short circuit in the vehicle's electrical distribution box, according to Norwegian news site VG. Nel received a report of an incident involving a fire at the Kjørbo hydrogen station outside Oslo, Norway, at 17:40 CEST on June 10, 2019. The fire was contained just after 20:00 CEST. Police are currently investigating a break-in at the site after around 50 to 60. The preliminary Gexcon investigation shows that the incident started with a hydrogen leakage from the high-pressure storage unit and that a 'cloud' of hydrogen ignited. World's most compact – simple to integrate with other fuels and standardized Drawing for illustrative purposes only.
