

Connecting Huawei fiber optic switch to network cable

Article Overview

To connect a Huawei fiber optic switch to a network cable, use SFP modules or media converters to link the optical ports to Ethernet cables, ensuring proper installation and signal integrity.

Step 1: Prepare the Switch and Cables

Before connecting, ensure the switch is powered off and you are using an ESD wrist strap or gloves to prevent electrostatic damage . Identify the optical ports on your Huawei switch, which may include SFP or SFP+ slots designed for fiber optic modules . Prepare the fiber optic cable, typically with SC/APC or SC/UPC connectors, and verify the Ethernet cable (Cat6a or higher) for network connections .

Step 2: Install Optical Modules

Insert the appropriate SFP or SFP+ module into the switch's optical port. If using a BiDi SFP module, it can transmit and receive data over a single fiber strand, which is useful when fiber availability is limited . Remove dust plugs from both the optical module and the fiber connector before insertion to prevent signal loss .

Step 3: Connect Fiber to the Switch

Gently insert the fiber optic connector into the SFP module until it clicks into place. Avoid forcing the connector, and ensure the locking clip is engaged . Route the fiber...
