

Cost of a 100-square-meter distribution box

Article Overview

The cost of a 100-square-meter distribution box can range from \$3,000 to \$15,000 or more, depending on capacity, materials, and installation complexity.

Factors Affecting Cost

- **Material and Construction:** Distribution boxes can be made from ABS plastic, powder-coated steel, or high-grade stainless steel. Outdoor or weatherproof units generally cost more due to durability requirements and corrosion resistance .
- **Capacity and Amperage:** Higher amperage panels (e.g., 200A) and multi-phase systems for commercial or industrial use increase costs significantly compared to standard residential panels .
- **Internal Components:** A box sold empty is cheaper, but adding circuit breakers, surge protectors, busbars, and smart monitoring systems increases the price .
- **Installation Complexity:** Labor costs vary by region and project scope. Typical electrician rates range from \$75-\$120 per hour, with total labor for a large commercial panel replacement or installation ranging from 6-18 hours . Additional costs may arise from conduit rerouting, structural modifications, or meter socket upgrades.
- **Smart Features and Modularity:** Modern distribution boxes may include energy monitoring, remote control, and modular expansion for future circuits, which can raise the upfront cost but improve long-term efficiency .
