

Does mobile fiber optic service include a router

Article Overview

Yes, most mobile fiber optic internet services include a router, either provided for free or integrated with the ONT.

Router Inclusion in Fiber Service

Fiber internet requires a router to distribute the connection from the Optical Network Terminal (ONT) to your devices via Wi-Fi or Ethernet. In many cases, providers supply a router as part of the installation package at no additional cost. For example, T-Mobile Fiber plans come with a free Wi-Fi 6 router, optimized for high-speed connections and capable of handling gigabit-level speeds . Similarly, AT&T Fiber provides a gateway device that functions as both a modem and router, supporting Wi-Fi 6 or Wi-Fi 6E for multiple connected devices .

How the Router Works with Fiber

The fiber line enters your home and connects to the ONT, which converts light signals into data your router can use. The router then creates a Wi-Fi network or provides wired connections to your devices. Some providers offer combo units where the ONT and router are integrated, while others use separate devices for flexibility and performance . For larger homes, mesh systems can be added to extend Wi-Fi coverage.
