

Fiber Optic Internet Router Setup

Article Overview

Properly connecting your fiber router to the ONT, optimizing placement, and configuring settings ensures maximum speed and stable connectivity.

Preparing for Setup

Before connecting your router, ensure your fiber service is active and the Optical Network Terminal (ONT) is installed by your ISP. Verify that the fiber cable is undamaged, free of sharp bends, and clean at the connectors to prevent signal loss . Choose a location near a power source and central to your home or office for optimal Wi-Fi coverage . Ensure there is enough space for the router and any antennas.

Connecting the Router

- Power on the ONT and wait for indicator lights to stabilize.
- Use a high-quality Ethernet cable (CAT6 or better) to connect the ONT's LAN port to the router's WAN port .
- Install antennas if provided, following manufacturer instructions.
- Check LED indicators: Power, Internet, and Wi-Fi lights should be green. A red Internet light may indicate a connection issue, requiring a check of cables or ISP support .

Router Configuration

- Access the router's admin interface via a web browser or app.
- Select the correct connection type (usually DHCP or PPPoE, depending on your ISP) and verify compatibility with the ONT
