

Fiber optic flange connection pigtail price

Article Overview

Some fiber optic flanges are sold with pigtails included, but this depends on the product; prices vary based on type and configuration.

Inclusion of Pigtails

A fiber optic flange is a mechanical component used to mount or align fiber optic connectors, often in optical distribution frames or experimental setups. By itself, a flange does not necessarily include a pigtail. However, certain products, such as a 4-port FC thickened 0.8MM fiber optic terminal box flange, explicitly include a pigtail along with the flange as part of the package. A pigtail is a short fiber optic cable with a factory-terminated connector on one end and bare fiber on the other, designed for splicing into a main fiber cable. Including a pigtail allows for immediate connection to fiber systems without field termination.

Pricing

The price of a fiber optic flange with a pigtail can vary depending on the type, material, and number of ports. For example, listings on platforms like eBay show flange + pigtail kits priced in the range of \$10-\$30 USD for small terminal box flanges with a few ports. More specialized flanges, such as precision stainless steel threaded flanges for laboratory or industrial use, may cost more, often \$50-\$100 USD or higher, depending on specifications and included accessories.
