

Has El Salvador installed fiber optic patch cords

Article Overview

El Salvador has local availability of fiber optic patch cords through distributors, but the country's first international submarine fiber optic cable is not expected to be operational until 2028.

Current Availability

Local companies, such as Fibra Óptica Internacional (FOINTER), have been distributing fiber optic cables and accessories in El Salvador since 2005. They provide a wide range of products, including patch cords, ODF cabinets, and splicing kits, designed for both underground and aerial networks, with high durability and long service life . This indicates that fiber optic patch cords are indeed installed and available for use in domestic networks, enterprises, data centers, and other applications.

International Connectivity

Currently, El Salvador relies on land-based fiber links through neighboring countries like Guatemala and Honduras for international internet connectivity . The government has contracted Liberty Networks to construct the country's first submarine fiber optic cable, which will connect El Salvador directly to international networks. This cable, approximately 1,800 kilometers long, is expected to enhance bandwidth capacity, improve internet stability, and increase resilience, but it is scheduled to become operational in the second half of 2028
