

How is the price of fiber optic cable plus steel wire calculated

Article Overview

The price of fiber optic cable plus steel wire is calculated based on cable type, fiber count, armor type, jacket material, and installation complexity.

Key Factors Affecting Price

- **Fiber Type and Count** Single-mode fiber is generally cheaper than multimode fiber, but higher strand counts increase costs proportionally. For example, a 12-strand cable costs roughly half of a 24-strand cable per foot or meter .
- **Cable Construction and Armor** Armored cables, which include steel tape or interlock armor for protection, add \$0.60-\$1.20 per foot for corrugated steel tape, with interlock armor costing more . Outdoor or direct-burial cables require additional protection, increasing material costs by 20-50% .
- **Jacket Material and Environmental Rating** Indoor PVC or LSZH jackets are cheaper, while outdoor PE or UV-resistant jackets are more expensive. Special ratings for flame retardancy or low-smoke compounds can add 25-40% to the base cost .
- **Installation Method** Costs vary depending on whether the cable is installed via open trench (\$0.90-\$1.80 per foot), directional boring (\$3.00-\$7.00 per foot), aerial on utility poles (\$1.20-\$2.50 per foot), or indoor plenum pathways (\$0.80-\$1.70 per foot) . Labor, trenching, splicing, and termination are significant contributors to total cost .
- **Length and Bulk Discounts** Buying longer reels reduces per-foot cost. For example, a 10,000 ft reel can be ~20% cheaper per foot than a 1,000 ft reel .
