

How many ports does a Huawei 48-port switch have

Overview

Port Configuration: 48 x 10/100/1000BASE-T ports for flexible network connectivity. Enhanced Performance: Up to 176 Gbps switching capacity ensures smooth data transmission. A Huawei 48-port switch is a fixed-configuration Ethernet switching platform offering exactly 48 physical RJ45 or SFP-based interfaces—designed primarily for wired endpoint connectivity in structured cabling environments. Unlike modular chassis switches, these are purpose-built for predictable. Huawei CloudEngine S5755-H series switches are high-quality gigabit access switches that provide 24 or 48 10/100/1000BASE-T downlink ports, four 25GE plus two 100GE uplink ports, and expansion card slots. If one port uses a GPON optical module, other ports cannot be used. It is used with a console cable. The console cable is not delivered with the switch and needs to be separately purchased if needed. To. The Huawei S220-48P-4X is designed to deliver robust performance and flexibility, making it an excellent choice for users seeking a reliable managed PoE switch for their networking needs.
