

How to check if your router supports fiber optic internet

Article Overview

A router connected to fiber optic internet is typically linked to an Optical Network Terminal (ONT), which converts fiber signals into Ethernet for the router.

Check Your Internet Service Documentation

Start by reviewing your internet service contract or billing statements. Look for terms like “fiber,” “fiber-optic,” “FTTH (Fiber to the Home),” or plan names such as “Fios” or “GigaFiber”. If your plan mentions DSL, cable, or broadband without fiber references, it's likely not fiber optic .

Look for an Optical Network Terminal (ONT)

Fiber internet requires an ONT, a small box installed by your ISP that converts light signals from the fiber line into a usable Ethernet connection for your router. The ONT is usually located inside your home, often in a garage, basement, or utility closet, or sometimes just outside near where the fiber enters the house. If your router connects to an ONT via Ethernet, it's a strong indicator of a fiber connection .

Check Your Router's WAN Port and Compatibility

Your router should have a Gigabit Ethernet WAN port to connect to the ONT. Most modern routers, including Wi-Fi 6 models, are compatible with fiber internet, but older routers may limit speeds. Routers do not directly connect to fiber cables; the...
