

How to connect a fiber optic lamp to a router

Article Overview

You should not connect a fiber optic lamp directly to a router's network ports; instead, mount the lamp physically near the router and power it using its own power source.

Physical Mounting

- **Choose a Safe Location:** Place the fiber optic lamp near the router without obstructing airflow or access to ports. Routers generate heat, so avoid placing the lamp directly on top of vents or heat sinks .
- **Use Adhesive or Clips:** Small LED fiber optic lamps can be mounted using double-sided tape, Velcro strips, or cable clips to secure the lamp base to the router's shelf or nearby wall .
- **Route Fiber Strands Carefully:** Arrange the fiber optic strands so they drape aesthetically around the router without bending sharply, which can damage the fibers .

Power Considerations

- **Separate Power Source:** Fiber optic lamps typically require a low-voltage power adapter (often 5V-12V DC). Do not attempt to draw power from the router's USB or Ethernet ports, as this can damage the router .
- **Cable Management:** Use cable ties or clips to keep the lamp's power cord organized and away from the router's ventilation or network cables
