

How to connect a set-top box to a fiber optic cable for your home

Article Overview

To connect a fiber optic set-top box, link it to your Optical Network Terminal (ONT) via Ethernet, then configure it through your router for internet access.

Step 1: Locate Your Optical Network Terminal (ONT)

The ONT is the device that converts the fiber optic signal into data your home devices can use. It is usually installed near your electrical panel, in a closet, or another out-of-the-way location. Ensure the ONT is powered on and the status lights indicate an active connection .

Step 2: Connect the Set-Top Box to the ONT

Use an Ethernet cable to connect the set-top box to the ONT. Plug one end into the port labeled “ONT” or “Fiber Jack” on the ONT and the other end into the Ethernet port on your set-top box . Avoid looking directly into any loose fiber connectors, as the light can be harmful to your eyes .

Step 3: Connect to Your Home Network (Optional)

If your set-top box requires Wi-Fi, you can connect it to your router instead of directly to the ONT. For wired connections, the Ethernet cable from the ONT can go to your router, and then the set-top box can connect via Ethernet or Wi-Fi to the router
