

How to discharge a whole roll of optical cable

Article Overview

Discharging a whole roll of optical cable requires careful handling, proper reel setup, and controlled payoff to prevent tangling, kinking, or damage.

Preparing the Reel

- Inspect the reel: Check for loose flange bolts, debris, or damage that could interfere with cable payoff. Tighten flange bolts if necessary to prevent the reel from deforming during discharge .
- Position the reel upright: Always keep the drum in an upright position on a stable surface or reel stand. Avoid laying it flat, as this can crush lower layers of cable .
- Use proper lifting equipment: For heavy reels, use a forklift with forks longer than the drum width, or a crane with a shaft and spreader bar to prevent flange damage .

Cable Payoff Techniques

- Follow the roll direction: Pay off the cable in the direction indicated by the arrows on the reel flange to avoid loosening or kinking .
- Maintain back-tension: Keep slight tension on the cable as it is pulled off the reel. Slack in the top layer can lead to tangling or “squirting” of the cable .
- Use a figure-of-eight method: For long runs, consider the figure-of-eight technique to prevent twists and maintain cable integrity .
- Control the speed: Avoid letting the reel over-spin. Stop periodically to check tension and alignment
