

How to handle mobile fiber optic cables

Overview

It is imperative that certain procedures be followed in the handling of these cables to avoid damage and/or limiting their usefulness. Although flexible, fiber optics are made of glass and this property makes it very fragile. Both types come in a coil or on a reel and are typically installed in the same areas with similar tools and techniques. Yet the materials differ greatly. The fibers are surrounded by a protective coating, strength members, and an. Fiber optic technicians and telecom workers are in charge of installing, maintaining, and fixing fiber optic network systems. This can involve working with lasers, precision equipment, micro-scale glass fragments, heights, tools, and working near or with utility or electrical infrastructure.
