

How to install the optical module top and bottom

Article Overview

Install optical modules by handling them carefully, aligning correctly, and securing them without touching the gold contacts or optical surfaces.

Preparation and Safety

- **ESD Protection:** Always wear a grounded ESD wrist strap or touch a grounded metal surface before handling the module to prevent static discharge damage to sensitive components .
- **Dust Prevention:** Keep dust caps on both the module and fiber connectors until ready to connect. Clean fiber end-faces with proper tools to avoid signal loss or scratches .
- **Disconnect Cables:** Ensure all fiber or copper cables are disconnected before inserting the module to prevent damage .

Handling the Module

- **Hold by Housing:** Grip the module by its metal or plastic body, or by the pull-tab/bail clasp. Never touch the gold-plated contacts or optical bores .
- **Check Orientation:** Identify the correct orientation using the module label or latch position. For SFP modules, the latch is usually on the bottom; for QSFP, it may be on the top or side .
