

How to set up transparent fiber optic cable to router

Article Overview

You cannot plug a fiber optic cable directly into a standard router; it must first connect to an Optical Network Terminal (ONT), which converts the optical signal into an electrical signal your router can use.

Required Equipment

- Fiber Optic Cable: Typically single-mode with SC/APC or SC/UPC connectors, transmitting data via light pulses. Handle carefully to avoid damage.
- Optical Network Terminal (ONT): Converts the incoming light signal from the fiber into an electrical signal compatible with your router. Usually provided by your ISP.
- Router: Must have a WAN or Ethernet port to receive the signal from the ONT. Fiber-ready routers with gigabit or multi-gigabit support are recommended.
- Ethernet Cable: Cat6a or higher to connect the ONT to the router.
- Power Supplies: For both the ONT and router.

Step-by-Step Connection Process

- Locate the Fiber Entry Point: Identify where the ISP's fiber line enters your home or office.
- Connect Fiber to ONT: Remove protective caps from both the fiber cable and the ONT port. Align the connector carefully and insert until it clicks securely. Avoid touching the fiber tip to prevent contamination or damage.
- Power On the ONT: Plug in the ONT and wait for the status lights to stabilize, indicating a successful connection to the ISP network....
