

How to use the fiber optic interface on a router

Article Overview

To use a router with a fiber optic interface, connect the fiber line to an Optical Network Terminal (ONT), then link the ONT to a compatible router via Ethernet, and configure the router with your ISP credentials.

Required Components

- Optical Network Terminal (ONT): Converts optical signals from the fiber line into electrical signals your router can use, usually provided by your ISP ().
- Fiber Optic Cable: Typically single-mode with SC/APC or SC/UPC connectors, connecting the wall outlet to the ONT ().
- Router: Must support fiber input or have a WAN/Ethernet port compatible with the ONT ().
- Ethernet Cable: Connects the ONT to the router's WAN port, preferably Cat6a or higher for optimal speeds ().
- Power Cables: For both the ONT and router.

Step-by-Step Setup

- Locate the Fiber Outlet: Identify where the ISP's fiber line enters your home.
- Connect Fiber to ONT: Plug the fiber optic cable into the ONT's designated port. Ensure a secure connection to avoid signal loss ().
- Power On the ONT: Wait 2-5 minutes for the status lights to stabilize.
- Connect ONT to Router: Use an Ethernet cable to link the ONT's LAN port to the router's WAN port ()....
