

Huawei Integrated Power Distribution Box

Article Overview

Huawei's Integrated Power Distribution Box, including models like PDU8000 and DPU240D-N40A1, provides modular, reliable, and intelligent power distribution for data centers and telecom networks.

Overview

Huawei's Integrated Power Distribution Boxes (PDCs) are designed to deliver stable, efficient, and safe power management for high-density environments such as data centers and telecom facilities. They support both AC and DC power distribution, depending on the model, and are engineered to integrate seamlessly with Huawei's intelligent power management solutions, enabling real-time monitoring, fault detection, and energy optimization .

Key Models

- PDU8000 Modular Power Distribution Cabinet: Features a modular architecture, standard manufacturing processes, and built-in electrical meters. It supports both single-input and dual-input configurations, allowing flexible deployment and easy expansion. The cabinet is designed for precision power distribution, ensuring reliability and simplified maintenance .
- DPU240D-N40A1: A DC power distribution unit optimized for -48V telecom networks, providing modular and efficient power management for high-availability environments. It is suitable for next-generation communication infrastructure requir...
