

Panama SC APC Fiber Optic Connectors

Article Overview

High-temperature SC/APC fiber optic connectors are available from OEM brands, supporting single-mode and multimode fibers with reliable performance up to 120°C.

Overview of SC/APC Connectors

SC/APC connectors feature a Subscriber Connector (SC) design with a push-pull mechanism for easy installation and removal, and an Angled Physical Contact (APC) polish with an 8-degree angle to minimize back reflection and improve signal quality . These connectors are ideal for high-bandwidth applications such as FTTH, CATV, and data communications networks, offering low insertion loss (0.2–0.3 dB) and high return loss (>60 dB) .

High-Temperature Resistance

For applications requiring elevated temperature tolerance, high-temperature fiber optic connectors are available that can withstand up to 120°C . These connectors are compatible with single-mode, multimode, polarization-maintaining, and microstructured fibers, making them suitable for fiber optic patch cords, pigtails, optical fiber grating sensors, and distributed optical fiber sensors . Corning also offers high-temperature fibers with improved fatigue resistance and hydrogen permeation resistance, which can be paired with SC/APC connectors for harsh environments .

OEM and Customization Options

Many suppliers provide OEM/ODM customization, including custom colors, labeling,...
