

# Points deducted for dismantling fiber optic cables

## Article Overview

Dismantling fiber optic cables can lead to financial losses, depreciation adjustments, and potential legal consequences, though specific “points” penalties depend on local laws and regulations.

### Depreciation and Accounting Considerations

Fiber optic cables are treated as long-term assets in accounting. When dismantled, their value must be adjusted for depreciation. Under IFRS, depreciation spreads the cost of the asset over its useful life using methods such as straight-line, reducing balance, or units of production, reflecting wear, usage, or obsolescence (Bridge-Connect) . In the U.S., the IRS allows depreciation deductions for fiber optic nodes and trunk lines under sections 167 and 168, with prescribed recovery periods and methods (TaxNotes, KPMG) . Removing cables prematurely may require adjusting depreciation schedules and could result in financial write-offs.

### Tax Implications

Fiber optic networks may qualify for bonus depreciation under U.S. tax law if the assets have a recovery period of 20 years or less, allowing accelerated deductions (National Law Review) . Dismantling or destroying cables could affect eligibility for these deductions, potentially increasing taxable income or reducing deferred tax benefits....
