

Price of the light control module

Article Overview

A vehicle light control module typically costs between \$400 and \$1,200 for replacement, with repair options available at 30-50% lower cost.

Replacement Costs

For most domestic and import vehicles, a complete lighting control module replacement—including parts and labor—ranges from \$400 to \$1,200. The module itself can cost \$80 to \$800, depending on whether it is an OEM or aftermarket part, while labor typically ranges from \$150 to \$600. Vehicles with simpler electrical systems or easier access to the module fall toward the lower end, whereas complex systems or modules integrated into larger control units can increase costs significantly. OEM modules are generally 2-4 times more expensive than quality aftermarket alternatives but offer guaranteed fit and longer warranties.

Repair Options

Repairing a faulty LCM is often 30-50% cheaper than buying a new module. Services like UpFix provide plug-and-play repairs for headlights, tail lights, and interior lighting, which can extend the module's life and reduce overall costs.

Factors Affecting Cost

- Vehicle make and model: Some modules are easier to access, reducing labor costs.
- Labor rates: Costs vary by location and whether you use a dealership or independent shop....
