

Processing of Low Voltage Cable Trays in Indonesia

Article Overview

Low voltage cable trays in Indonesia are fabricated using materials like mild steel, stainless steel, aluminum, and FRP, with standardized processes ensuring durability, safety, and compliance with international and local standards.

Types of Cable Trays and Materials

Indonesian manufacturers produce a variety of cable trays suitable for low voltage applications, including:

- Ladder-type trays: Ideal for heavy cables, providing strong support and ventilation.
 - Perforated trays: Allow airflow and are suitable for data centers and server rooms.
 - Wiremesh trays (Cable Cage): Lightweight, flexible, and highly ventilated, often used in commercial and industrial installations.
 - Duct trays: Enclosed trays for additional protection against dust and moisture.
- Materials commonly used include mild steel, stainless steel, aluminum, and Fiber Reinforced Plastic (FRP), with options for hot-dip galvanization (HDG) to enhance corrosion resistance and durability (PT. Surya Cakra Mandiri, PT Mitra Nusa Internasional) .

Fabrication and Processing Standards

The processing of cable trays in Indonesia typically involves:

- Cutting and shaping: Raw materials are cut to standard lengths (commonly 3 met...
