

Special Verification of Relay Protection Systems

Overview

Technicians verify protection relay safety by performing visual inspections, primary and secondary injection tests, event log checks, and simulated fault conditions. With the integration of sophisticated Business Intelligence (BI) and Data Analytics techniques, relay technicians are now empowered to verify relay system protection schemes more precisely than ever before. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system reliability, and ensure continuity of power across your network. Since the basic function of a protection relay is to correctly function under abnormal. THEY SHOULD BE GIVEN FIRST LINE MAINTENANCE ATTENTION. COMPREHENSIVE INSPECTION, MAINTENANCE AND TESTING PROGRAM. " relay may only need to operate for 0. But failure to operate as intended can result in extensive damage, extended power outages, and loss of life.
