

# Tapping for installing the distribution box

## Article Overview

Tapping involves creating threaded holes or mounting points to securely fix a distribution box to a wall or panel, ensuring stability and safety.

### Preparing for Installation

Before tapping or mounting a distribution box, choose an appropriate location: it should be dry, accessible, well-ventilated, and away from water, flammable, or corrosive substances. For residential setups, the recommended height is around 1.5 meters above the ground, while industrial installations depend on surrounding equipment and space. Ensure the box has enough clearance for wiring, ventilation, and future expansion.

### Tools and Materials Needed

- Drill with appropriate bits for the wall material (concrete, brick, or wood)
- Tap set for creating threaded holes if using screws or bolts
- Insulated screwdrivers and wrenches
- Anchors or mounting brackets suitable for the wall type
- Level to ensure proper alignment

### Tapping and Mounting Procedure

- Mark the Mounting Points: Use the distribution box as a template to mark where holes will be drilled. Ensure alignment and level.
- Drill Pilot Holes: Drill holes at the marked points according to the size of the screws or bolts. For concrete or brick, use masonry bits....
