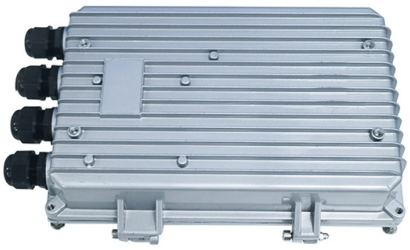
The circuit breaker trips when the distribution box is turned on



Overview

A tripping circuit breaker could be a sign of an overloaded circuit, a short circuit, a ground fault, or a worn-out breaker. Homeowners will want to hire an electrician to determine the cause of the frequently tripping circuit breaker. Circuit breakers serve as your home's electrical guardians – they automatically cut power when detecting dangerous conditions. Occasional tripping is normal protection behavior, but frequent tripping signals underlying issues needing attention. But what's causing it?

And more importantly, does it need an expensive fix, or is this something simple?

The good news: Most circuit breaker trips have straightforward explanations, and many don't require major repairs.
