

What to do if the switch s optical port is lit but not powered

Overview

Begin by looking at the power and LED lights on your network switch. Make sure all cables are plugged in tight. Turn your switch off and then on to fix errors. This helps you find. The Cisco Small Business Series Switches allow you to plug in a Small Form-factor Pluggable (SFP) transceiver in their optical modules to connect fiber optic cables. Once the transceiver and fiber optic cable are plugged in properly in the switch optical module, you should be able to view the. A single broken wire or one shutdown port can cause the problem where one side has a link light, but the other side does not. A link light does not guarantee that the cable is fully functional. The cable can have encountered physical stress that causes it to be functional at a marginal level. This guide explains what each light means, how to.
