

What type of cable tray is best for outdoor use

Article Overview

For outdoor applications, ladder-type cable trays made from corrosion-resistant materials like aluminum, fiberglass (FRP), or stainless steel are generally the best choice.

Recommended Tray Types

Ladder Cable Trays are ideal for outdoor use because they provide excellent ventilation, support heavy power cables over long spans, and allow easy access for maintenance or cable additions. Their open design helps prevent water accumulation and reduces heat buildup, which is critical in outdoor environments . Perforated Cable Trays can also be used outdoors for moderate-weight cables, offering continuous support with some ventilation. They are suitable when small debris or drip protection is a concern, but they may require covers in areas with heavy rain or snow . Solid-Bottom Cable Trays are less common outdoors unless maximum protection from contaminants, dust, or sensitive cables is required. They provide full coverage but can trap moisture, so proper drainage or covers are necessary .

Material Considerations

- Aluminum: Lightweight, corrosion-resistant, and easy to install. Suitable for most outdoor environments .
- Fiberglass Reinforced Plastic (FRP): Non-conductive, highly resistant to corrosion, ideal for areas with sensitive electronics or high moisture exposure ...
