

What types of routers should be used with gigabit fiber optic cables

Overview

After analyzing nine models ranging from compact VPN-focused units to enterprise-grade edge routers, I've mapped the specs that matter most when choosing the best routers for fiber optic. Fiber optic internet demands a router that can handle symmetric throughput without dropping. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. However, you need a router capable of supporting multi-gig speeds to get fiber internet connectivity. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet.
