

Wholesale of 24-core ADSS optical fiber cable

Article Overview

24-core optical fiber cables are widely available for wholesale, with options including ADSS, outdoor, single-mode, and armored types, suitable for bulk orders and large-scale network deployments.

Types and Features

ADSS (All-Dielectric Self-Supporting) 24-core cables are designed for aerial installations without metallic support wires. They feature a loose tube stranded structure filled with water-blocking compound, reinforced with aramid fibers, and protected by a polyethylene or electric tracking-resistant sheath. These cables are lightweight, have excellent tensile strength, and can span over 1000 meters, making them ideal for high-voltage transmission line networks and outdoor installations . Outdoor 24-core fiber cables are built for rugged environments. They typically include a durable HDPE outer jacket, water resistance, UV protection, and optional armored construction for mechanical protection. These cables support high-speed data transmission over long distances and are suitable for campus, town-to-town, or pole-to-building networks . Single-mode GYXTW cables are optimized for high-capacity, long-distance connectivity. They are available for wholesale starting at approximately \$0.04 per piece, with bulk orders beginning at a minimum of 2 units, making them suitable for resale or distribution .
